Source: Iraq Stock Exchange

\*Last Financials: The date of the most recent financial statements.

P/E (Last): We divide "Current MCap" to "annualized YTD profit".

P/BV (Last): Calculated by dividing "Current MCap" to "BV in its Last Financials".

For P/E calculation, we will use unaudited 2011-year-end financial statements until the companies announce their audited financial statements. Generally, the companies don't announce after tax profit in their unaudited financial statements, so while calculating P/E with unaudited financial statements, we use estimated net profit=(profit before tax) X (1- previous year's effective tax rate)).

\*\*When the original shares resume trading, we start using the number of shares that the company will reach after the capital increase with the assumption that the capital increase was reflected to the price of the shares. We use the new capital in calculating MCap, too.

Note: "Suspend/ISC" companies are not trading due to ISC Instructions.

"Suspend/GA" companies are not trading due to General Assembly Meetings

"(NR)": These are the companies which are trading in the Non-Regular market (in compliance with Iraq Securities Commission law numbered 132/9 on 20/12/2012). These companies were moved to the secondary market (no regular) because of the decrease in their trading volume and the number of days that these companies are being traded for. Please note, according to the Regulations of the Secondary Market, in each trading session, the average share price will be calculated for each share. The maximum increase and decrease of +/- 20% will be based on the average price in the previous session. The price should be valid during three effective trading sessions after the listing and it will be free in the first trading session after capital increasing.
