*Average data was calculated according to recent six months, by dividing the total daily trading volume (excluding two highest trading vol.) to total number of trading days (excluding the No. of days share were suspended due to GA or by ISC).

** Last Financials: The date of the most recent financial statements. Total number of trading days during the last 6 months were 115.

P/E (Last): We divide "Current MCap" to "annualized YTD profit".

P/BV (Last): Calculated by dividing "Current MCap" to "BV in its Last Financials".

For P/E calculation, we will use unaudited 2011-year-end financial statements until the companies announce their audited financial statements. In general, the companies don't announce tax in their unaudited financial results, so we use estimated net profit=(profit before tax) X (1- previous year's effective tax rate)) if the data is not available, while calculating P/E.

***When the original shares resume trading, we start using the number of shares that the company will reach after the capital increase with the assumption that the capital increase was reflected to the price of the shares. We use the new capital in calculating MCap.

Note: "Suspend/ISC" companies are not trading due to ISC Instructions.

"Suspend/GA" companies are not trading due to General Assembly Meetings.
