Notes:

***Upside Potential based on 52-week High:** We calculate this ratio to show the potential gain if the stock is purchased at the recent closing price and if it reaches its highest level occurred in the last 12 months. While calculating the highest share price in the last one year, we calculate the adjusted historical closing prices by considering the dividend distributions and capital increases.

****P/E (Last):** Price to Earnings ratios are calculated by dividing "the current Mcaps" by "the annual/annualized net profits" calculated according to the recently announced financial results. While calculating P/E (Last) for the banks, we depended on trailing net profit, while for the rest of the sectors, we depended on annualized cumulative net profit because it is not possible to calculate trailing profit for some companies due to the lack of information. Please note that we adjusted unaudited profit before tax values by deducting 15% income tax to be able to have comparable data for all companies.

P/BV (Last): Price to Book Value ratios are calculated by dividing "the current Maps" by "the Equity" in its Last Financials.

****Ann. ROE (Last):** We calculate the "Annualized Return on Equity (Last)" ratio by dividing the annualized cumulative net profit (estimated only if profit after tax is not available, by deducting 15% income tax from the profit before tax) by the average Equity in recently announced financial results.

Ann ROA (Last): We calculate the "Annualized Return on Assets (Last)" ratio by dividing the annualized cumulative net profit (estimated only if profit after tax is not available, by deducting 15% income tax from the profit before tax) by the average Assets in recently announced financial results.

***Avg. Daily Trad. Vol.:** Average daily trading volume is calculated by dividing the total trading volume in the last twelve months by the total number of trading days (excluding the number of days which the company was suspended from trading due to a general assembly meeting (GA) or a decision by the Iraqi Securities Commission (ISC).

****P/E (Last):** Price to Earnings ratios are calculated by dividing "the current Mcaps" by "the annual/annualized net profits" calculated according to the recently announced financial results. While calculating P/E (Last) for the banks, we depended on trailing net profit, while for the rest of the sectors, we depended on annualized cumulative net profit because it is not possible to calculate trailing profit for some companies due to the lack of information. Please note that we adjusted unaudited profit before tax values by deducting 15% income tax to be able to have comparable data for all companies.

P/BV (Last): Price to Book Value ratios are calculated by dividing "the current Maps" by "the Equity" in its Last Financials.

*****Ann. ROE (Last):** We calculate the "Annualized Return on Equity (Last)" ratio by dividing the annualized cumulative net profit (estimated only if profit after tax is not available, by deducting 15% income tax from the profit before tax) by the average Equity in recently announced financial results.

Ann ROA (Last): We calculate the "Annualized Return on Assets (Last)" ratio by dividing the annualized cumulative net profit (estimated only if profit after tax is not available, by deducting 15% income tax from the profit before tax) by the average Assets in recently announced financial results.

****When a company/bank decides to increase its capital in its annual general meeting, we put **** next to its name when the original shares resume trading and we increase the capital with the assumption that the capital increase was reflected in the price of the shares. We delete *** when the new shares resume trading after the completion of the capital increase.

Terms:

"**ISC**": Companies that are not trading due to ISC Instructions.

"**GA**": Companies that are not trading due to General Assembly Meetings.

"**(NR)**": These are the companies that are trading in the non-Regular market (in compliance with Iraq Securities Commission law numbered 132/9 on 20/12/2012). These companies were moved to the non-regular market because of the decrease in their trading volume and the number of days that these companies were being traded for. In each trading session, the average share price is calculated for each share. The maximum increase and decrease of +/- 20% are based on the average price in the previous session. The price should be valid during three effective trading sessions after the listing, and it will be free in the first trading session after the capital increase.

"**(UCM)**": Undisclosed Companies Market. The companies which have been suspended from trading due to not disclosing their financial statements by ISC resumed trading on Jul. 3, 2022 in a platform called "Undisclosed Companies Market" with the aim to protect the rights of shareholders in joint-stock companies listed on the ISX. The price change limit for the daily transactions is at +/- 5%"

"We use the FX rate given by the bank that Rabee Securities makes its banking transactions while calculating the dollar values in our research reports instead of CBI market FX rate to be more conservative."
